Implementation Status and Key Decisions

The project is making significant progress including the provision of inputs for sustainable land and water management practices, forest management planning and restoration, formation of the Community Resource Management Area (CREMA), wildlife monitoring, trainings on online license application, and identification of pilot sites for rehabilitation of mined out areas. Procurement, and environmental and social due diligence for several planned activities are also progressing well.

The project, through participatory processes, has supported the development of **353 community watershed management plans** in the Northern Savannah Zone (NSZ) and Cocoa Forest Landscape (CFL). Based on these plans, over **15,000 smallholder farmers have received training and**

inputs, and an additional **20,331 farmers, about 50% of which are women**, have been screened and verified to receive project support to implement sustainable landscape management (SLM) practices.

466 community fire volunteers have been trained and provided resources to protect fire prone forest resources in their areas, including project investments such as riparian vegetation and restored areas within forest reserves. The project supported the **establishment of 14 Protected Area Management Units (PAMAUs)** for participatory resource management. **Earth Ranger, a wildlife monitoring technology**, has also been installed in Mole National Park to provide real-time data for improved wildlife management.

Training on online mineral licensing procedures (MCAS) was conducted for 1053 government staff and small-scale miners. The project has also **provided essential instruments for implementing agencies** under the Ministry of Lands and Natural Resources (MLNR) to advance implementation and supervision of core activities including a drone, vehicles, motorbikes, and equipment for airborne geophysical surveys. In addition, **ten (10) pilot mined-out sites have been selected for reclamation** and the **detailed design for renovation of two (2) Minerals Commission regional offices** in Wa and Bolgatanga have been confirmed.

Comments:	This indicator measures ongoing management effectiveness in the three targeted wildlife protected areas (Gbele Resource Reserve, Mole National Park, and Digya National Park). It is expected that project investments in protected areas management will increase effectiveness of their management. This will be measured by applying the standard Management Effectiveness Tracking Tool (METT) score. PAs management is considered to be improved when there is an increase in a PA's baseline METT score. The METT is widely used by the Bank and other organizations to assess how effectively protected areas are being managed. It comprises a detailed questionnaire that covers a broad range of management effectiveness issues, with the total score for each protected area ranging from 0 to about 100. This indicator measures the adaptive capacity of resilience as modification / improvement in the ecosystem.
